TAGS → ELEMENTS → WEBPAGE → WEBSITE

HTTP – For local view

HTTPS – For online view – secured

TAGS

Tags are predefined keyword enclosed in angular bracket

Types:

- Self closing tag
- Closing tag

Closing tags are making element.

Self closing tags are making direct content.

Tags give the behaviour and meaning to the normal content.

ELEMENTS

Elements are making browser **structure**, basically one element have **opening tag, closing tag, in between content** these three called element.

Some elements have **parent element and child element**.

PARENT ELEMENT (Closing tag)

It holds a **child element**. Sematic tags or non sematic tags.

CHILD ELEMENT (Self-closing tag)

It holds a **direct content**. Normal closing tags like h1 to h6, p, a, img, form, table.

ROOT ELEMENT – HTML

CONTAINER ELEMENT – HEAD (Browser information),

BODY (Webpage information),

CONTENT – Information we have.

6 IMPORTANT TAGS
